

IN THE ABSTRACT

Please replace the Abstract with the following replacement abstract:

A method for interconnecting a user's location to a destination location on a network. The unique information is received at the user's location, which unique information has no associated routing information embedded therein. Network routing information is associated with the received unique information in response to receipt thereof. The user's location is then ~~interconnect~~ interconnected to the destination location across the network in accordance with the routing associated therewith in the step of associating.
